**Securing microelectronics.
Securing your world.**

The background of the slide is a blue-tinted, high-angle photograph of a complex microelectronics circuit board. The board is densely packed with various components, including integrated circuits, resistors, and traces, creating a grid-like pattern of light and shadow. The image is split diagonally from the top-left to the bottom-right. The upper-left portion is a solid dark purple, which serves as the background for the main title. The lower-right portion is a solid dark blue, which serves as the background for the speaker's name and the footer. The overall aesthetic is technical and futuristic.

Securing microelectronics. Securing your world.

Dr. James Wilson
Program Manager, DARPA/MTO

Everyday life

Everyday life depends on microelectronics (that you know)

Everyday life depends on microelectronics (that you might not be aware of)
